The GIHS program in **Industrial Safety** Certification covers a wide range of topics to enable participants to confidently manage safety at workplace. Safety is the state of being “safe”, the condition of being protected from harm or other non-desirable outcomes. Safety can also refer to the control of recognized hazards in order to achieve an acceptable level of risk. Industrial Safety will also cover the regulatory audits. Industrial Safety is an umbrella term for the **laws, rules, guidance and processes** designed to help protect employees, the public and the environment from harm. In the workplace, the responsibilities for designing and implementing appropriate procedures is often assigned to a specific department, often called the “Safety” department which is responsible for **environmental protection, occupational health and safety at work**. Safety management has two general objectives: prevention of incidents or accidents that might result from abnormal operating conditions and reduction of adverse effects that result from normal operating conditions
