Pharmacovigilance Training Program also known as **Drug Safety**. This is the pharmacological science relating to the collection, detection, assessment, monitoring, and prevention of adverse effects with pharmaceutical products. As such, pharmacovigilance heavily focuses on adverse drug reactions, or ADRs, which are defined as any response to a drug which is noxious and unintended, including lack of efficacy, which occurs at doses normally used for the prophylaxis, diagnosis or therapy of disease, or for the modification of physiological function monitored by the physicians. Medication errors such as overdose, and misuse and abuse of a drug, are also of interest because they may result in an ADR. This GIHS Pharmacovigilance Program designed to provide total overview and skill globally in the field of clinical research and pharmacovigilance. It would help professionals to upgrade & develop their knowledge about pharmacovigilance, regulatory issues and other major aspects of pharmacovigilance. This program will enhance you on medical & scientific writings, you will be expert in Medical writing which involves the development and production of print or digital documents that deal specifically with medicine or health care. The profession of medical writing calls for knowledge in both writing and science, combining a writer's creative talent with the rigor and detail of research and the scientific process.
